

## Valve Training – Level 2

### Course Overview

#### Details

---

This course provides a more detailed overview of more complex valves more suited to experienced work force. The course combines presentation style learning with informative videos ensuring the course content is presented in an engaging but educational environment.

This provides a deeper understanding into valves and as such is more suited to experienced maintenance technicians & trades people, operators, planners and engineers. This course promotes awareness through the understanding of flow control principles, associated components, and the basic challenges that can be faced when working with flow control applications on site.

#### Who Should Attend

This course is suited to anybody looking for a basic introduction to valves including (but not limited to) maintenance technicians, trades people, operators and junior engineers.

#### You will cover:

- Rising Stem Ball Valves
- Bellow Sealed Valves
- Automatic Recirculation Valves
- Cryogenic Valves
- Q & A

Note: There are no prerequisites for this course however Valve Training – Level 1 would be an advantage

#### Course Outline

This course looks at the more complex valve types, how they work and the components they are made up of. We will also discuss the different applications they are suited for and the advantages and disadvantages of one design against another.

### **Outcomes**

Upon successful completion of the course, Winnellie Valves will issue a certificate of acknowledgement to the participant, stating the course name and other relevant details. Please note that whilst we trust you will find value in learning more about valves with us please note this course is not nationally recognised.
